

SmarTech Additive Manufacturing Service Bureaus Research and Advisory Program

The SmarTech Additive Manufacturing Service Bureaus Advisory Service provides intelligent market segmentation, quantification, opportunity forecasting, and insights around the “final frontier” of additive manufacturing - part production and related services.

Part production services have been a vital part of the additive manufacturing (AM) industry for decades, originally revolutionizing the rapid prototyping industry in the late 1980’s and 1990’s, and evolving into the core of a growing opportunity of digitally-enabled rapid manufacturing services. Utilization of 3D printing on demand as an outsourced partner, along with related competencies like 3D modeling and design for additive manufacturing, post processing, finishing, and complementary traditional manufacturing activities are all combining to create the next century’s digital manufacturing landscape. The world’s largest manufacturers are already working to employ similar practices internally, but outsourced “Service Bureaus” for additive and 3D printing are disrupting both product development and production by creating accessible, all-encompassing additive manufacturing services.

Subscribers to the SmarTech Additive Manufacturing Service Bureaus Advisory Service will receive a wealth of quantitative market data on additive manufacturing parts printing services worldwide, complimenting SmarTech’s offerings on opportunities in additive manufacturing and 3D printing hardware, materials, and software, to provide clients market intelligence on the entirety of the additive manufacturing value chain.

Market opportunity and forecast data includes

Market sizing (revenues) for Additive Manufacturing parts printing and directly related services split by:

- Provider Type
- End User Industry
- Primary Product Material Family
- Geographic Region
- Specific Areas of Application

Quantification of production volumes of outsourced 3D printed or additively manufactured components by:

- Industry
- Primary Production Material
- Application Group
- Region
- Market Segmentation by Service Provider Type

Contact SmarTech to schedule a time to learn how our services can help your company maximize its opportunities within Additive Manufacturing.
